(F. Y. B-tech Computer)

Have successfully completed their DTIL Project report

On

RAIN WATER HARVESTING SYSTEM

Towards the Partial Fulfillment of Bachelor's Degree

In Computer Science Engineering

During the Academic year 2024 – 25

Prof. Pravin Chokakkar

Dr. Ajit Muzumdar

Acknowledgement

We would like to express our sincere gratitude to our esteemed project guides, Dr. Ajit Muzumdar and Mr. Pravin Chokakkar, for their invaluable guidance and support throughout our DTIL Project on “Rain Water Harvesting”.

Through this project, our team gained a comprehensive understanding of the design thinking process, mind mapping, journey mapping, and prototype development. We developed essential skills in problem-solving, critical thinking, and collaboration. Their expertise and mentorship played a significant role in shaping our project and helping us to achieve our objectives. We are grateful for the time and effort they invested in our project.

We would also like to thank our group members for their active participation, cooperation, and contributions to the project. This project would not have been possible without the collaborative effort of our team.

Report

1. Topic Selection
2. End User Persona
3. Mind map
4. 5W1H activity
5. Theory of Prioritization
6. Problem Statement
7. SCAMPER Activity
8. Journey Map
9. Working of the App/Model
10. Discussion on the usability of the App/Model
11. Conclusion

Topic Selection

For our project, we selected the topic of Rain Water Harvesting under SDG 6 (Clean water and Sanitation) to enhance water conservation and management.

End User Persona

Persona contains a Background, Challenges faced, Motivation, Doubts and Fears, Aspiration and the summary of end users.

Our end users are Farmer, Homeowners .We created persona on this end users showing their background, their challenges and their pain points.

PERSONA CREATION FOR END USER

❖ FARMER

Background: <ul style="list-style-type: none">-Ramesh 40 year old farmer having experience in farming-Farming totally dependent on Rainwater.-Less family income-Form rural area-Education up to 10th	Motivation: <ul style="list-style-type: none">-Seeing crops growing-Fulfilling family needs-Steady income and profitability from farming
Challenges: <ul style="list-style-type: none">-Faced Water scarcity-Financial Problem-Water Quality-Climate Change	Doubts/Fears: <ul style="list-style-type: none">-Unfamiliar with technology-Climate change uncertainly-May be worried what if rain won't come regularly
Aspiration: <ul style="list-style-type: none">-Improve family well being-To protect the crops from drought and water scarcity	
Summary: <p>Ramesh a farmer , benefits from rainwater harvesting by increasing water availability. He needs a system that's easy to install . His pain points are water scarcity , crop failure .</p>	

Activate Windows

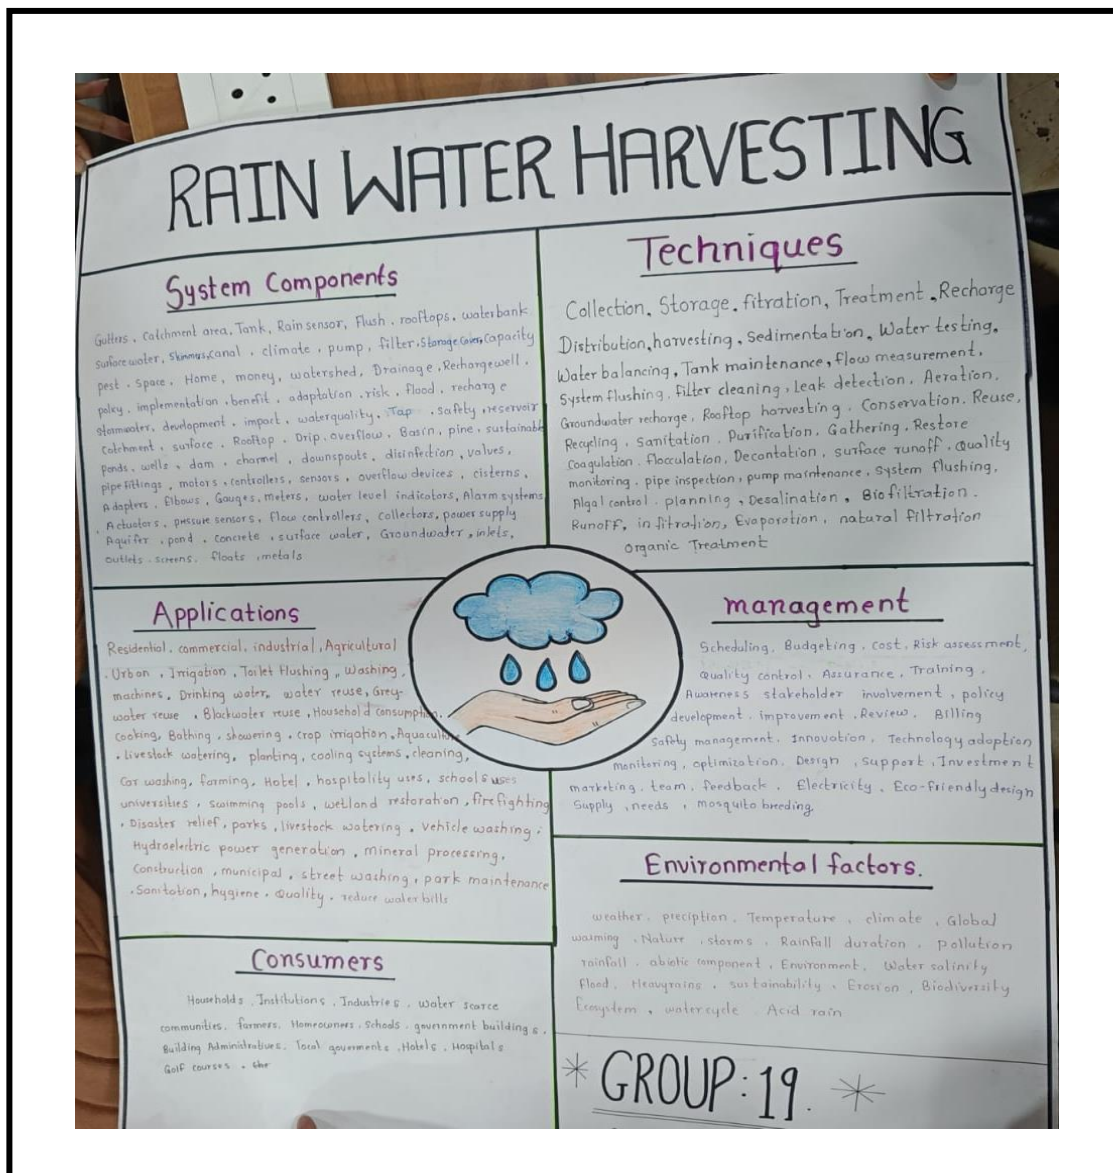

❖ HOME OWNERS

Background: <ul style="list-style-type: none">-Rakesh 30 year old-Employee in store-Less family income-Education : B.com	Motivation: <ul style="list-style-type: none">-Personal Satisfaction-Improve Quality of life-Increased property value
Challenges: <ul style="list-style-type: none">-Limited Space for installation.-Ensure Water Quality and Safety-Maintenance of system	Doubts/Fears: <ul style="list-style-type: none">-Unfamiliar with technology-System Durability-Effectiveness and Efficiency doubts-Water Quality concerns.
Aspiration: <ul style="list-style-type: none">-Reduce dependence on municipal water supply.-Save money on water bills.-contribute to environmental Sustainability.	
Summary: <p>Rakesh is a motivated to install a rainwater Harvesting System to reduce dependency on municipal water supply ,enhance his family's quality of life and desires to live a sustainable life.</p>	

Activate Windows

Mind Map Activity

Mind Map is Creative activity used to connect ideas. Mind Map visualizes your ideas and helps you to understand your topic. Through this Activity We found 210 words related to rainwater harvesting System then we categorized them into subtopics, which helped us to emphasize the topic in well mannered.

5W1H Activity

5W1H is a activity in which we have to find the questions related to our topic. We applied this to our topic then we found the questions related to rainwater harvesting system, which helped us in clarifying the problems and projects importance and necessity.

RAIL WATER INVESTING

5W1H

WHO

- Who performs maintenance?
 - Environment:
 - Environmental Protection Agency
 - State Department
 - Local Government
 - Consumer:
 - Business
 - Industry
 - Government
 - Non-Profit
 - Techniques:
 - Water Treatment
 - Water Distribution
 - Water Conservation
 - Water Pollution Control
 - System:
 - Water Supply
 - Water Demand
 - Water Quality
 - Water Quantity
- Who benefits?
 - Environment:
 - Environmental Protection Agency
 - State Department
 - Local Government
 - Consumer:
 - Business
 - Industry
 - Government
 - Non-Profit
 - Techniques:
 - Water Treatment
 - Water Distribution
 - Water Conservation
 - Water Pollution Control
 - System:
 - Water Supply
 - Water Demand
 - Water Quality
 - Water Quantity

WHAT

- What machinery is used?
 - Environment:
 - Environmental Protection Agency
 - State Department
 - Local Government
 - Consumer:
 - Business
 - Industry
 - Government
 - Non-Profit
 - Techniques:
 - Water Treatment
 - Water Distribution
 - Water Conservation
 - Water Pollution Control
 - System:
 - Water Supply
 - Water Demand
 - Water Quality
 - Water Quantity
- What type of techniques are used?
 - Environment:
 - Environmental Protection Agency
 - State Department
 - Local Government
 - Consumer:
 - Business
 - Industry
 - Government
 - Non-Profit
 - Techniques:
 - Water Treatment
 - Water Distribution
 - Water Conservation
 - Water Pollution Control
 - System:
 - Water Supply
 - Water Demand
 - Water Quality
 - Water Quantity

WHERE

- Where are maintenance facilities located?
 - Environment:
 - Environmental Protection Agency
 - State Department
 - Local Government
 - Consumer:
 - Business
 - Industry
 - Government
 - Non-Profit
 - Techniques:
 - Water Treatment
 - Water Distribution
 - Water Conservation
 - Water Pollution Control
 - System:
 - Water Supply
 - Water Demand
 - Water Quality
 - Water Quantity
- Where are environmental benefits realized?
 - Environment:
 - Environmental Protection Agency
 - State Department
 - Local Government
 - Consumer:
 - Business
 - Industry
 - Government
 - Non-Profit
 - Techniques:
 - Water Treatment
 - Water Distribution
 - Water Conservation
 - Water Pollution Control
 - System:
 - Water Supply
 - Water Demand
 - Water Quality
 - Water Quantity

WHEN

- When is maintenance performed?
 - Environment:
 - Environmental Protection Agency
 - State Department
 - Local Government
 - Consumer:
 - Business
 - Industry
 - Government
 - Non-Profit
 - Techniques:
 - Water Treatment
 - Water Distribution
 - Water Conservation
 - Water Pollution Control
 - System:
 - Water Supply
 - Water Demand
 - Water Quality
 - Water Quantity
- When is water used?
 - Environment:
 - Environmental Protection Agency
 - State Department
 - Local Government
 - Consumer:
 - Business
 - Industry
 - Government
 - Non-Profit
 - Techniques:
 - Water Treatment
 - Water Distribution
 - Water Conservation
 - Water Pollution Control
 - System:
 - Water Supply
 - Water Demand
 - Water Quality
 - Water Quantity

WHY

- Why is water used?
 - Environment:
 - Environmental Protection Agency
 - State Department
 - Local Government
 - Consumer:
 - Business
 - Industry
 - Government
 - Non-Profit
 - Techniques:
 - Water Treatment
 - Water Distribution
 - Water Conservation
 - Water Pollution Control
 - System:
 - Water Supply
 - Water Demand
 - Water Quality
 - Water Quantity
- Why are water resources scarce?
 - Environment:
 - Environmental Protection Agency
 - State Department
 - Local Government
 - Consumer:
 - Business
 - Industry
 - Government
 - Non-Profit
 - Techniques:
 - Water Treatment
 - Water Distribution
 - Water Conservation
 - Water Pollution Control
 - System:
 - Water Supply
 - Water Demand
 - Water Quality
 - Water Quantity

HOW

- How is water used?
 - Environment:
 - Environmental Protection Agency
 - State Department
 - Local Government
 - Consumer:
 - Business
 - Industry
 - Government
 - Non-Profit
 - Techniques:
 - Water Treatment
 - Water Distribution
 - Water Conservation
 - Water Pollution Control
 - System:
 - Water Supply
 - Water Demand
 - Water Quality
 - Water Quantity
- How is water treated?
 - Environment:
 - Environmental Protection Agency
 - State Department
 - Local Government
 - Consumer:
 - Business
 - Industry
 - Government
 - Non-Profit
 - Techniques:
 - Water Treatment
 - Water Distribution
 - Water Conservation
 - Water Pollution Control
 - System:
 - Water Supply
 - Water Demand
 - Water Quality
 - Water Quantity

Theory of Prioritization

Theory of Prioritization is the process of finding the problems related to the topic and then assigning the weightage to each problem. As the problem which will having higher weightage will be most impactful and focusing point. We found the total nine problems and assigned weightage to each, and we got “Lack of Resources” with higher weightage of “5200”.

PROBLEMS WE FOUND RELATED TO RWH SYSTEM	
PROBLEMS	WEIGHTAGE
Lack of Awareness	3300
Proper Maintenance	4100
Storage Capacity	4100
Seasonal Dependence	2310
Lack of Resources	5200
Government Support	1500
Water Scarcity	3300
Water Quality	1500
System Failure	1500

Problem Statement

The resources, which are needed for installation of rainwater harvesting system, are not easily available, particularly in rural or undeveloped areas. People's faces difficulty in Accessing Rainwater Harvesting Components, because of lack of local suppliers.

SCAMPER Activity

The SCAMPER Technique is a creative Problem-solving method. Its Acronym stands for:

S: Substitute	(Replace a component or process)
C: Combine	(Merge two or more Ideas)
A: Adapt	(Adjust an Existing Solution)
M: Modify	(Change a Component or Process)
P: Put to another use	(Repurpose an existing Solution)
E: Eliminate	(Remove unnecessary components)
R: Rearrange	(Reorganize existing elements)

WE USED “C- Combine “

By applying **SCAMPER** technique to our problem statement, we identified that we can **combine** online platform for component purchasing with offline installation services and companies through which Peoples can buy components online. Easily Resources will be available. Will Increase efficiency.

Journey Map

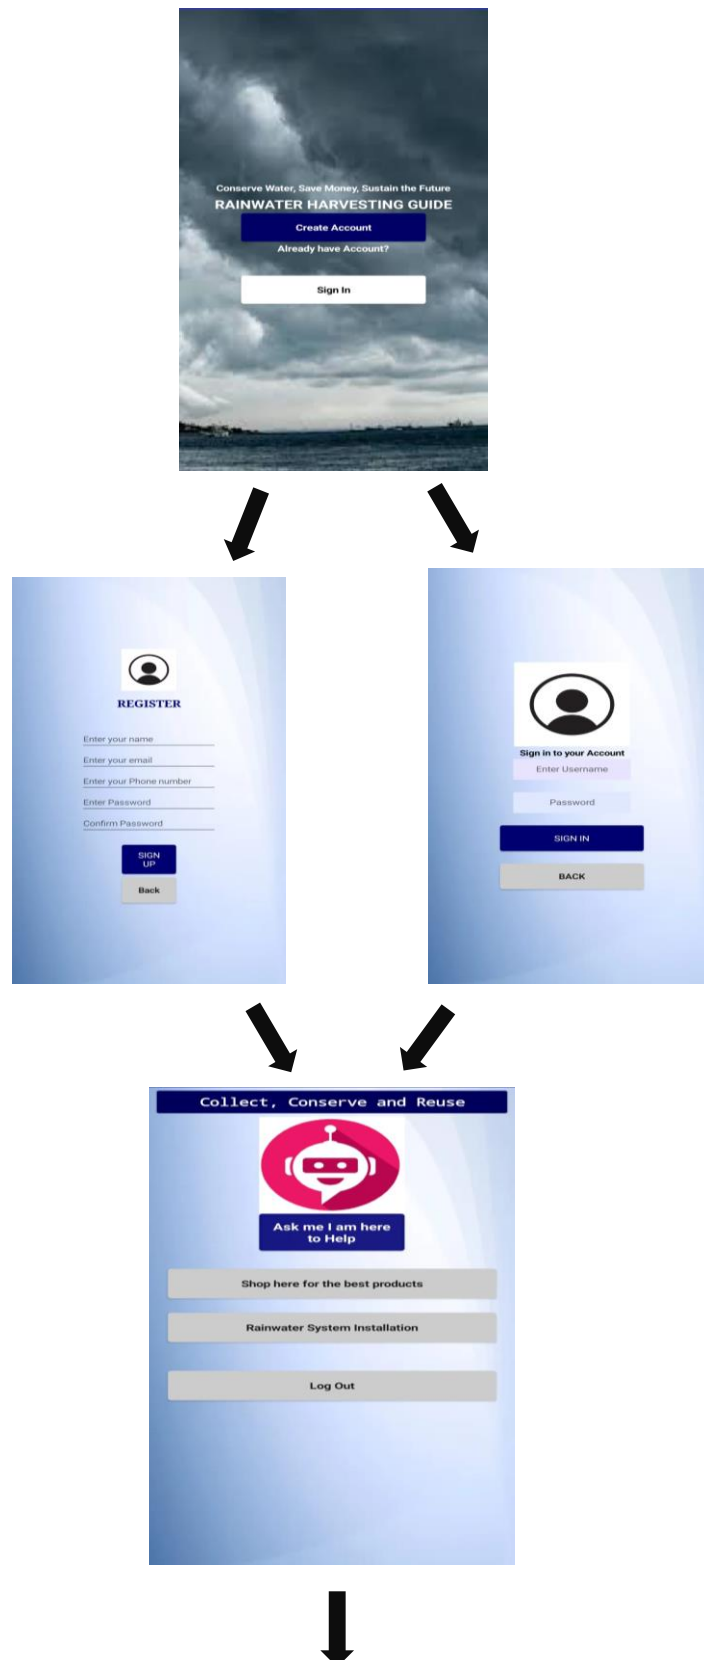

Journey Map is the graphical representation of users experience with App. It is a powerful tool for understanding users need, identifying pain points and enhance user experience.

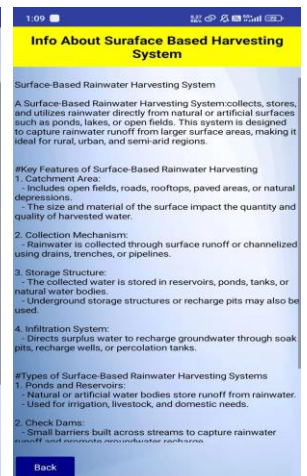

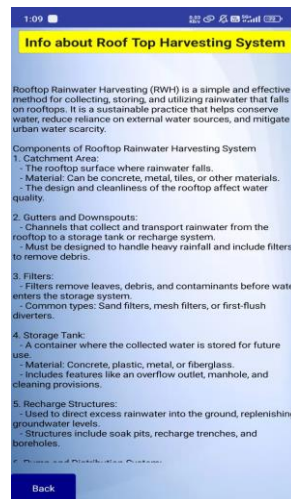

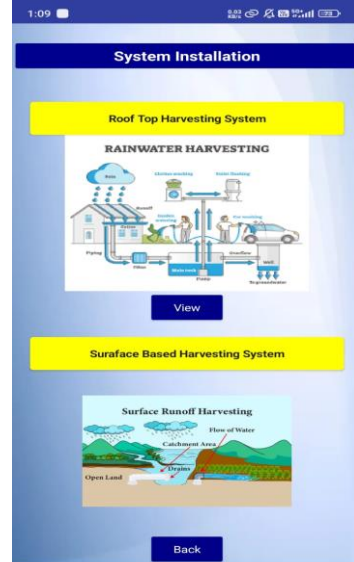

GRAPH AS PER THE EMOTIONAL JOURNEY OF USER

EVENTS	EMOTION
-Wants to install RWH system	motivated
-Start Searching About Setup	Confident
-Starts searching About the Components and resource	low confident
-Got to know about Rainwater Harvesting APP	Confident
-Hopefully Installs and sign in to the APP	Confident
-starts searching	low Confident
-Gets the content matching to his expectation	little Confident
-Gets some Content Helpful	confident
-Gets some helpful content and leaves the App	little confident

Working of the App/Model

Discussion on Usability of the App

The app process is seamless with minimal steps. Dashboard provides clear overview of content. It allows users to easily find information on rainwater harvesting system. We used clear and simple language. The content we implemented in the app is user-friendly.

Conclusion

Overall, the Rainwater Harvesting App is strong, focusing on simplicity, efficiency, and user needs and satisfaction. It has been designed considering a wide range of users, providing clear and useful content.
